

Appln. No. 09/748,650
Amendment dated August 8, 2005
Reply to Office Action of May 9, 2005

Amendments to the Specification:

Please replace the text of the Abstract (page 32) with the following amended Abstract.

The present invention is directed to a digital image printer which incorporates a jogging system for providing an inexpensive means printer for improving color saturation when imaging from a digital display which has monochromatic pixels. The device includes a printer having a housing that encloses, in a common cavity thereof, an arrangement ~~comprising~~ including a digital area array display, a plurality of lenses, and an image plane. The digital area array display, the plurality of lenses, and the image plane are spaced along an optical axis extending from the digital area array display through the plurality of lenses, and toward the image plane such that a digital image provided by the display can be brought into focus onto the imaging plane by the plurality of lenses. One of the plurality of lenses is a transposable lens, the transposable lens capable of being transposed out of the optical axis during the operation of the printer, to increase the perceived resolution of the digital image focused onto the imaging plane.
